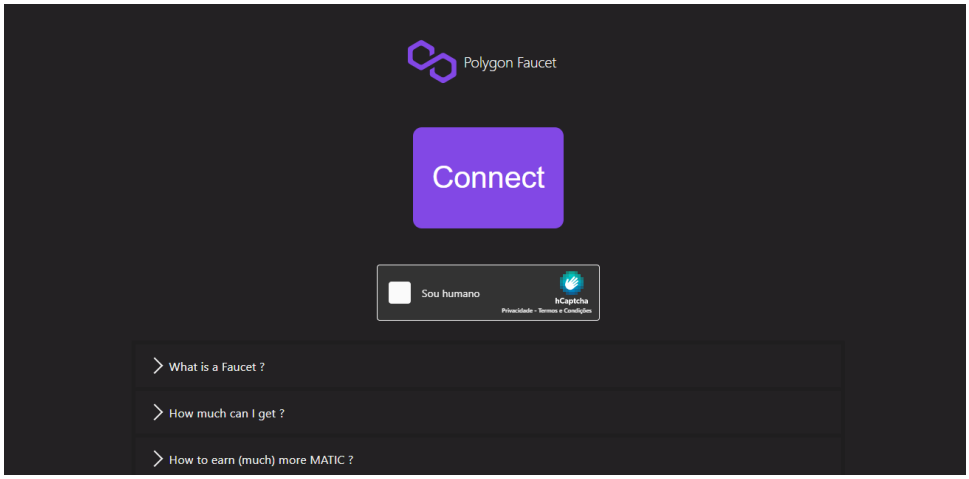
How to get Polygon (MATIC) to pay transaction fees FOR FREE.

The Polygon network (MATIC) has gained great prominence in the world of cryptocurrencies due to its ridiculous fees (almost non-existent). It is a second layer solution of the Ethereum network, which seeks a scalable network and is supported by giants like Binance and Coinbase.

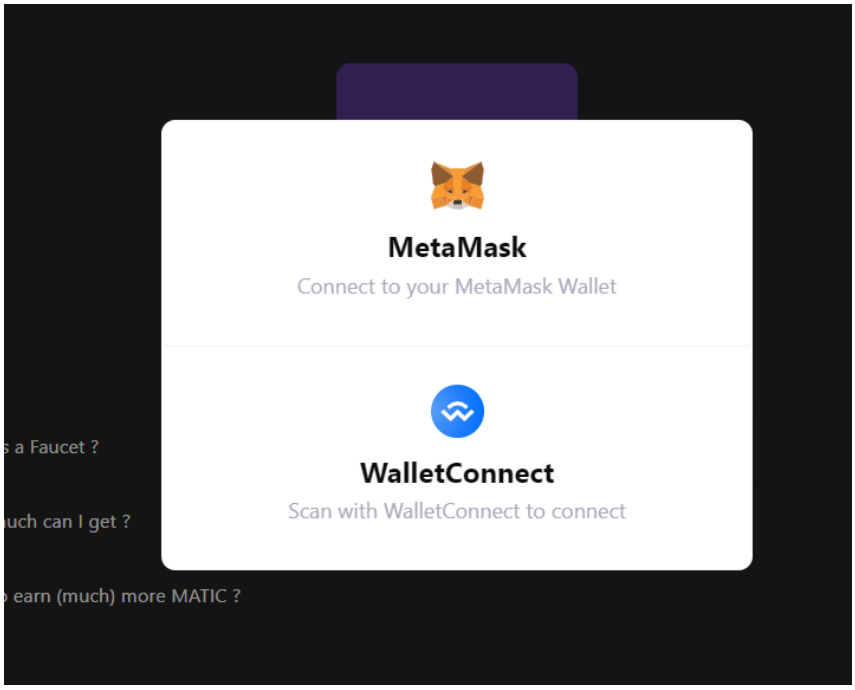
However, despite the negligible fees, as mentioned above, sometimes an isolated operation is sought – the purchase of a token in a DEX, for example – and the individual does not always have the necessary fractions of the token to pay the transaction fees.

In today's post, we'll show you a free way to get these token fractions quickly. Check out the walkthrough below.

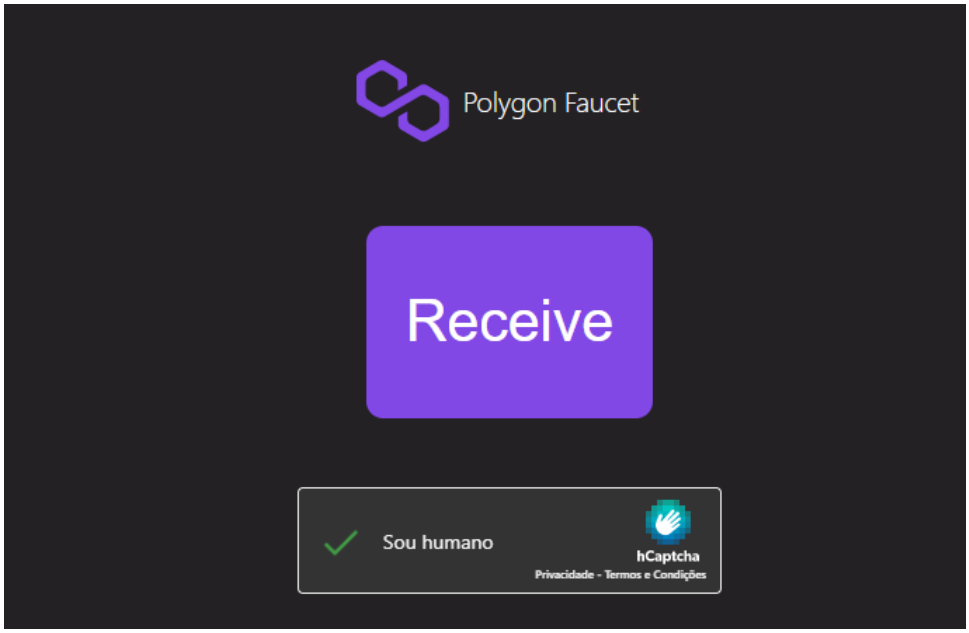
1 – Access the website https://matic.supply . After that the following screen should appear:



2 – Solve the captcha and click on “Connect”. After this step, the following screen will appear:



3 – Choose the way you want to connect your wallet. It is important to ensure that your wallet is connected to the Polygon network. After that, the following should appear:



4 – Click on “Receive” and that's it, the necessary fractions will be automatically sent to your wallet.

Note: It is important to note that this site aims to provide an amount of the MATIC token that is sufficient to pay network fees. If you already have a sufficient supply in your wallet, the platform detects and does not send the token fractions to your wallet.
